EDUCATION

University of Missouri, Columbia *(2023-2025)*
Master of Science in Computer Science
Sreyas Institute of Engineering and Technology
Bachelor of Technology in Computer Science and Engineering (2019-2023)

SKILLS

- **Programming Languages:** C, C++, Python, MySQL, PHP, JavaScript, SQL, HTML, CSS, R, Java
- **Frameworks & Tools:** TensorFlow, PyTorch, Pandas, Flask, AWS, ReactJS, NodeJS, Figma, MySQL WorkBench, Emacs, Git, Hadoop, Django
- **Operating Systems:** Windows, Linux, Ubuntu, Kali Linux, Mac

PROFESSIONAL EXPERIENCE

Teaching Assistant
University of Missouri, Columbia | August 2023 - Present

- Assisted in the development and delivery of course materials for advanced cybersecurity topics.
- Conducted lab sessions and provided one-on-one support to students.
- Graded assignments and exams, ensuring timely feedback.
- Collaborated with faculty to enhance the curriculum and improve student engagement.

Cyber Security Analyst Intern
Supraja Technologies | Jan 2022 – May 2022

- Conducted comprehensive assessments of security breaches and attacks, identifying system vulnerabilities and providing recommendations for mitigation.
- Developed and deployed custom scripts to address specific security threats, enhancing organizational cybersecurity posture.
- Performed penetration testing to evaluate system defenses, documenting findings, and suggesting improvements.
- Configured and utilized advanced security tools, generating detailed vulnerability reports for client remediation.

Ethical Hacker Intern
Supraja Technologies | Jun 2022 – Nov 2022

- Identified and reported critical security vulnerabilities in web applications, contributing to improved security for various organizations.
- Conducted Web Application Penetration Testing (WAPT) and bug hunting, enhancing security across multiple platforms.
- Performed detailed security assessments, providing actionable insights to clients for vulnerability resolution.

Software Developer Intern
Raise Digital | Nov 2022 – Mar 2023

- Worked on full-stack web application development projects with an emphasis on both front-end and back-end technologies.
- Contributed to backend services for an E-Commerce website using Flask and MySQL for relational database management.
- Integrated deep learning features into the API, enhancing overall performance.
- Utilized PHP and HTML for web design, ensuring a seamless user experience.
- Developed an Online Job Searching Platform, applying skills in web architecture, real-time database integration, and user experience design.

- Collaborated within an agile team environment, resolving real-time issues efficiently, and delivering high-quality code that met client standards.

Data Science Intern

Personifwy | Jun 2021 – Dec 2021

- Conducted data analysis using Linear Discriminant Analysis and Hierarchical Clustering techniques, generating insights for business applications.
- Developed an interactive chatbot leveraging NLP, NLTK, and BABI-META for training and testing, enhancing user engagement.
- Created a hospital chatbot using Google Dialogflow, streamlining patient interactions and information retrieval.

PROJECTS

Smart Attendance System Using Facial Recognition | *Oct 2022*

- Engineered an automated attendance system using facial recognition technology, reducing the need for manual entry and improving accuracy.
- Integrated camera input with face detection algorithms to identify and record attendance, with output converted to Excel sheet for reporting.

Home Appliance Control via Social Media | *Dec 2022*

- Developed a system using Raspberry Pi to control home appliances remotely through web-based commands or Tele Bot.
- Implemented automated status updates for home appliances, enabling remote monitoring and energy savings by switching off devices without physical presence.

Image Classification on CIFAR-10 using CNN | Jan 2023

- Designed and implemented a Convolutional Neural Network (CNN) architecture, achieving 91% accuracy in classifying images in the CIFAR-10 dataset.
- Enhanced the model's performance by integrating DenseNet, improving overall efficacy.
- Conducted extensive testing on depixelated images to evaluate model robustness and visualized results with detailed metric analysis.

Noun-Phrase Detection using Neural Networks | Jan 2023

- Transformed text data into numerical formats utilizing word embeddings and contextual embeddings for effective processing.
- Developed a customized neural network model, employing either recurrent or convolutional architectures, tailored for detecting noun phrases.
- Conducted rigorous training using annotated data, fine-tuning parameters to minimize loss, and verified the model's accuracy across diverse datasets.

SGChain and SDN using Knowledge Graphs in Power Grids | Jan 2023

- Engineered an automated system to detect and defend against Distributed Denial-of-Service (DDoS) attacks within power grid networks.
- Trained a neural network for Phasor Measurement Units (PMUs) and generated knowledge graphs for reference during future attacks.
- Leveraged AWS SageMaker for neural network training and effectively managed PMU datasets pre- and post-attack to enhance cyber defense strategies.

PUBLICATIONS

- **Smart Attendance Using Facial Recognition Publication:** International Peer- Journal (Volume 22, Issue 01) - 32 (YMER)
- **Smart Home Appliances Operations Design by IoT devices Publication:** International Peer- Journal (Volume 11, Issue VI) – (IJRASET)
